

Taiwan's Cross-Border Carbon Adjustment Mechanism Draft Law: A Step Toward Global Harmonization

February 20, 2025

Synopsis: Taiwan is set to introduce its own Cross-Border Carbon Adjustment Mechanism by the second half of 2025. The country aims to align this mechanism with global trade rules, specifically those of the World Trade Organization. The move comes in response to complaints from local steel and cement producers who are facing unfair competition due to the lack of carbon emission disclosures from foreign suppliers. This policy will require importers to disclose their carbon emissions and will impose a carbon levy on domestic producers starting in 2025. Taiwan's approach will be influenced by European Union regulations to ensure fair practices in the international trade of carbon-intensive goods.

SEE Holding & AGSI Join Forces to Drive Sustainable Construction with Low-Carbon Steel

February 20, 2025

Synopsis: SEE Holding has teamed up with AGSI to promote the use of low-carbon steel in construction and enhance sustainability. Their partnership will focus on improving energy efficiency, reducing emissions, and increasing project transparency, ultimately aiming for Net Zero construction practices.

Tosyalı Demir Çelik's Solar Power Plant Project in Turkey: A Green Leap Forward

February 20, 2025

Synopsis: Tosyalı Demir Çelik's solar power project in Çermik, Turkey, has completed the environmental evaluation phase and is moving forward with public consultations. The plant will generate enough energy to meet the needs of 36,500 households annually, with a 25-year lifespan for the project.
